EDUCATION

University of Washington, Seattle Master of Science in Computational Linguistics Thesis: <i>mSCAN - A Dataset for Multilingual Compositional Generalization Evaluation</i> Supervision: Prof. Shane Steinert-Threlkeld	2025 GPA: 3.8
Université Sorbonne-Nouvelle, Paris Bachelor of Arts in English Language and Literature	2020
Sorbonne Université (Paris IV-Paris VI) Bachelor of Science in Computer Science Bachelor of Arts in Philosophy	2019

RESEARCH EXPERIENCE

Reasoning and Bias in Large Language Models <i>Volunteer Research Assistant</i> Supervision: Prof. Aylin Caliskan, Information School – University of Washington	2024–Present
▪ Ongoing independent project: created datasets for the evaluation of content effects and representativeness heuristics, applications to social categories ▪ Collaboration (second author): study of motivated reasoning in LLMs. Ran experiments on GPU clusters, using HuggingFace, ollama and vLLM. Assisted in writing and created visualizations of experimental results	
Causal Reasoning in Large Language Models <i>Research Collaboration</i> Supervision: Prof. Zhijing Jin (P.I: Mrinmaya Sachan), Language, Reasoning, Education lab – ETH Zurich	2024
▪ Independent theoretical study examining how causal explanation and inference are conceptualized in NLP and philosophy of science ▪ Collaborated on the creation of a causal question benchmark and implemented a linguistic baseline	
Causal Inference and Narrative Understanding <i>Research Collaboration</i> Supervision: Dr. Michael Regan, (P.I: Prof. Yejin Choi), Computer Science and Engineering – University of Washington	2023
▪ Contributed to creation of dataset for causal schema detection of news stories ▪ Conducted literature review on narrative understanding and causal inference	
Negation Scope Detection in French <i>Research Project</i> Supervision: Prof. Pascal Amsili – Université Sorbonne Nouvelle (Paris III)	2020
▪ Worked with French TreeBank and its Universal Dependencies version to develop algorithms for negation scope detection to establish baseline

TEACHING EXPERIENCE

Université Sorbonne-Nouvelle (Paris III)

Sep 2020–June 2021

Linguistics Tutor

- Provided support remotely to over 100 undergraduate students in “Grammar and Linguistics” and “English Phonology” courses

UCL Francophone Society

Sep 2019–June 2020

Volunteer Instructor

- Designed and led weekly advanced French language and conversation classes for university students

INDUSTRY EXPERIENCE

NVIDIA

Nov 2023–May 2025

Generative AI Analyst

- Collaborated with research scientists and engineers to design and implement tooling and quality monitoring for LLM annotation projects (including for RLHF and multimodal models)
- Led in-depth assessment of multiple annotation platforms, designed taxonomies and interfaces for annotation initiatives
- Led the development of synthetic datasets to produce negative examples for Retrieval-Augmented Generation (RAG) models, and implemented evaluation methods

SKILLS

- **Programming:** Python (NLTK, NumPy, Pandas, HuggingFace), SQL, Bash
- **Languages:** English (fluent), French (native), German (intermediate), Danish (elementary)
